

SMARTER SOLAR MEANS PROVEN PROFITABILITY.

Higher Yields. Reliable Performance. Bankable Return.

At First Solar, we deliver sustainable profitability in solar energy. With more than 10GW installed worldwide, our advanced thin film solar technology has set new benchmarks for utility-scale photovoltaic (PV) power plants. These advanced solar modules yield up to 8% more energy with a lower degradation rate over others with the same power rating in real world conditions. When it comes to reliability, they are the first and only thin film

technology to pass the Thresher reliability and long-term sequential tests. That means you can expect best-in-class performance and durability, even in the harshest conditions. Plus, we back it all up with a 25-year performance warranty without open circuit limitations to promote a bankable return on your investment. Together, that equals sustainable profitability you won't find anywhere else. For more information on how First Solar delivers a smarter energy solution with maximum value and minimal risk, contact us at india@firstsolar.com.
