

BLADE SUPPLY ON FOUR CONTINENTS

lmwindpower.com

LM Wind Power delivers customer-specific blades and service for turbines across the globe. As the only blade supplier with full in-house blade development capabilities and a global manufacturing footprint, we enable our customers to deploy their platforms on several markets, at the same time, with the same quality.

Since 1978, we have provided blades to our customers in established and emerging markets, making us the blade supplier with the longest track record. And with manufacturing on or close to all major markets for wind, we secure blade deliveries, minimize transport and logistics costs, shorten delivery time and reduce working capital requirements.

Rooted in Denmark, in 1993 LM Wind Power was the first blade manufacturer to expand to India, and soon after the company added plants in Spain and the US. LM Wind Power was also the first to open local blade production in China in 2001. Today, we employ 6,843 people in 13 blade manufacturing facilities in Canada, USA, Brazil, Denmark, Poland, Spain, China and India, continuously expanding our footprint to help provide cost-efficient, reliable and clean energy everywhere.

Together, we capture the wind to power a cleaner world
